

Sympodium® DT770

Interactive Pen Display

Using SMART's new dual-touch DVIT™ technology, the Sympodium DT770 interactive pen display lets you control all of your peripheral devices from one display – with either touch or pen.

The DT770's interactive display accepts input from a battery-free tethered pen to control all your applications and write notes, and finger-touch technology lets you navigate room-control menus. This seamless integration with room-control systems simplifies design and installation, and makes presentations easier to deliver.

Just connect the DT770 to a computer and projector to comfortably interact with material at the front of the room while your audience simultaneously views the same content on a large screen. Pen-tool buttons above the display keep your presentation free from distracting floating toolbars for even greater audience focus.
